DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Notargiacomo et al (US Publication no. 2003/0014422).

Regarding claims 1, 10 and 11, Notargiacomo discloses in figures 1, 6 and 7 a system for creating a family tree, comprising a processor (10) programmed to receive a request from a user to return a file comprising the family tree; use a plurality of primary source records to construct the family tree based on the request, wherein the records indicate multiple alternatives for at least one branch of the family tree; send a file comprising the family tree to the user, wherein the file comprises the alternatives.

3. Regarding claims 2, 3, 12 and 13, Notargiacomo discloses in figures 3 and 4, wherein an alternative results from a difference relating to a selection from the group consisting of spelling, place, date, event 3 relationship, ancestor, spouse, and children; and wherein the processor is further programmed to provide an opportunity for the user to select among the alternatives.

4. Regarding claims 4-6 and 14-16, Notargiacomo discloses in figures 2 and 7, wherein the processor is further programmed to receive a selection from among the alternatives from the user, store the selection, use the selection to revise the family tree; and send a file comprising the revised family tree to the user; wherein the processor is further programmed to use the selection to provide an alternative to another user; and wherein the processor is further programmed to thereafter receive a non-contemporaneous request from the user to view the family tree; use the stored selection to construct the family tree; and send a file comprising the family tree to the user, wherein the family tree comprises the revised family tree.

5. Regarding claims 7-9 and 17-19, Notargiacomo discloses in figures 6 and 7, wherein the processor is further programmed to receive additional genealogy data that creates new alternatives in the family tree; and notify the user of the new alternatives; wherein in being programmed to notify the user of the new alternatives, the processor is further programmed to send the user an email; and wherein in being programmed to notify the user of the new alternatives the processor is further programmed to send the user a file comprising the family tree, wherein the file includes a new alternatives symbol (paragraph 0020).

Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art of record to Richard VanderDrift (US Patent no. 5,455,945) discloses a system and method for dynamically displaying, entering and updating data form a database.

Prior art of record to Kent W. Huff (US Patent no. 6,760,731) discloses a genealogy registry system.

Prior art of record to Tebbs et al (US Publication no. 2005/0114364) discloses a method and apparatus for processing genealogical data.
